

Veryant, the COBOL technology innovator

Evolution, without revolution

CEDACRI GROUP

Software to measure credit scores, solvency, and debt

CASE STUDY

Cedacri S.p.A., a major important Italian company specialized in IT outsourcing services for the banking sector, was acquired by ION Investment Group (IIG) in 2021. A leading financial software tech company on the international market, IIG provides development of software, data and analysis for international financial institutions, central banks and large corporations. Cedacri has over 200 clients – banks, financial institutions, industrial companies, and service companies.

Cedacri brought their numerous certifications to IIG including ISO 9001 in 2015, ISO/IEC 27001 in 2014, ISO/IEC 20000-1 in 2011, as well as ISAE 3402 Type Two, and ISAE 3000. They are also compliant with international PCI- DSS (Payment Card Industry - Data Security Standard).

Business Driver

Cedacri selected isCOBOL and Unikix technology because:

- they offered the greatest potential cost savings, while preserving existing legacy system integration requirements and end-user access methods;
- they provided a low-risk way to help customers take advantage of modern IT infrastructures and new computing paradigms such as cloud computing, without sacrificing existing application investments.

Solution

Mainframe COBOL programs were moved to the isCOBOL Evolve from Veryant. IBM® CICS® transactions, Batch workloads, Easytrieve programs, VSAM files, and IBM DB2® databases were migrated using UniKix Mainframe Rehosting technology.

Besides protecting existing application investments and minimizing end-user impact, the solution was a good fit for Cedacri because tight interoperability was maintained with legacy systems post-migration. End users continue accessing the application through a standard 3270 layer or a custom Web-based application, and support for IBM WebSphere® MQ and CICS distributed program link (DPL) functionality was maintained post-migration.

WHY VERYANT?

“It is crucial that we help customers adopt modern, flexible IT infrastructures and take advantage of virtualization and cloud computing in a secure, convenient manner, Mainframe rehosting with isCOBOL and Unikix enables us to provide our customers with important value in operational efficiency and a competitive edge without disrupting ongoing operations or quality of service levels.”
