Studio IGM provides software to over 200 private garden cultivators and nurseries in Italy. A leading group with experience in the IT sector, it develops and offers a wide range of software solutions for the complete management of the nursery, offering ad hoc tools that meet the needs required by the customer, whether they are administrative, accounting, control, market type, operating in Web oriented and / or stand-alone architecture, reliably and transparently.

Business Drivers

Studio IGM needed to provide a graphical, multi-platform Thin Client offering to its customer base that provided a simple way to manage pictures. Due to the nature of their application used in the field, it was important that the deployment platform be extremely portable and support multiple hand-held platforms without additional programming complexity.

Solution

The isCOBOL Evolve Suite, with its full support of Java technology, enabled Studio IGM to distribute its application solution on a range of platforms. In addition to providing portability for Studio IGM's application code and simple photo management options for end-users, Studio IGM leveraged isCOBOL JISAM to provide a completely Java-based, portable ISAM solution as well.

Today, Studio IGM is able to easily distribute its application on a wealth of Thin Client and stand alone implementations.

Partner

Studio IGM selected Veryant to move its application to isCOBOL Evolve and to support its implementation on the new target platform. Veryant provided both the COBOL and Java expertise to make this project a success.

"

I have always expected prompt help from my vendors and Veryant has exceeded that expectation time and time again. The COBOL debugger is superlative compared to the debugger we used previously.

Chiara Franchi, lead developer

Highlights

- Preserved valuable application assets and irreplaceable programming skills
- Enabled organization to take advantage
 of modern Java technology
- Retained long term customers and gained new sales opportunities
- Provided Web enablement, SOA, and Web Services
- Offered enhanced graphical user interface (GUI) capabilities

Evolution, without revolution
